

KAISER MOHIUDDIN

AI/ML Engineer · Generative AI Developer · Product Builder

Kupwara, J&K, India | +91 6006742403 | lonekaiser04@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Play Store](#)

SUMMARY

AI/ML Engineer and Generative AI Developer with experience architecting and shipping production systems, including an offline-first Android application with **480+ organic Play Store installs**. Engineered **RAG pipelines serving 5,000+ knowledge chunks**, reducing API latency by **~40% (~3.2s to ~1.9s)** through multi-layer caching. **AI/ML Research Intern at NIT Srinagar** with hands-on research experience in machine learning, and demonstrated **technical leadership at Smart India Hackathon 2026**, contributing to an AI-based identity and document screening system. Proven ability to take complex ideas from **concept through implementation and deployment**, combining technical ownership, research, and product execution.

TECHNICAL SKILLS

Languages: Python, Dart, JavaScript, SQL

Generative AI: LangChain, RAG, LangGraph, LLaMA, GPT, Prompt Engineering

AI / ML: Scikit-Learn, YOLOv8, OpenCV, Computer Vision, Supervised Learning

Backend & APIs: FastAPI, REST API Design, WhatsApp Cloud API

Frontend & Mobile: Flutter, HTML5/CSS3, Firebase Auth, Firestore, FCM

Databases & Cloud: MySQL, Firebase Firestore,, Docker, Git, GitHub

EXPERIENCE

Founder & Product Owner — SiratSync

May 2025 – Present

- Owned SiratSync end-to-end from concept to launch, driving Flutter/Firebase development and growing the product to **480+ organic Play Store installs** through cost-conscious, scalable architecture.
- Engineered a **RAG + LLM pipeline** serving 5,000+ knowledge chunks with intent detection and multi-turn conversations, reducing API latency by **~40%** through caching and expanding reach via **WhatsApp Cloud API** integration.

AI/ML Intern — NIT Srinagar (Onsite)

Jun – Jul 2026

- Collaborated within a research team on data preprocessing and model evaluation; independently researched Kashmiri sentiment analysis, turning an ambiguous problem into a defined, measurable outcome.

AI/ML Intern — Winnovation (Virtual)

Jun – Jul 2025

- Trained and evaluated ML models (KNN, Decision Trees, Linear Regression) on real datasets, building a Diabetes Detection capstone and a License Plate Detection system, working independently in a remote team setting.

PROJECTS & HACKATHONS

Sirat Assistant — Conversational Islamic AI [Github ↗](#)

Apr 2026 – Present

Stack: Python · LangChain · LLaMA · RAG · WhatsApp Cloud API · Flutter · Firebase

- Engineered a RAG pipeline for a live mobile app, reducing average response time from ~3.2s to ~1.9s via multi-layer caching, while designing intent detection and multi-turn conversation handling across content categories and extending the system to WhatsApp. ([Demo ↗](#))

SiratSync — Islamic Utility App [Play Store ↗](#) · [Website ↗](#)

May 2025 – Present

Stack: Flutter · Dart · Firebase Auth · Firestore · FCM

- Built and published a full-featured Android app (480+ organic installs): Quran reader, Hadith collections, Prayer Times, Qibla compass, Tasbeeh counter, habit tracking, and 5-language support, with Firestore real-time sync and an offline-first design.

Kashmiri Sentiment Analysis [Github ↗](#)

June – July 2026

- Built an end-to-end sentiment analysis system for Roman-transliterated Kashmiri — preprocessing, TF-IDF feature engineering, and evaluation of six classifiers — deploying the best model (Linear SVM) as a Flask app. (Python, Scikit-learn, Pandas, Flask)

Number Plate Detection & Blacklist Checking System [Github ↗](#)

Jul – Sep 2025

- Trained a custom YOLOv8 model for plate detection with OCR and perspective correction, plus a fuzzy-matching blacklist verification system resilient to OCR errors. (Python, YOLOv8, OpenCV, Tesseract/EasyOCR)

VeriShield AI — AI-Based Fake Identity & Document Screening | Smart India Hackathon 2026 · Team Leader, HackHive [Github ↗](#)

- Participated in **Smart India Hackathon 2026** as **Team Leader of HackHive**, developing **VeriShield AI**, a multi-module identity and document screening system combining OCR, document validation, forgery detection, facial verification, and explainable risk scoring. (Python, OpenCV, FastAPI, PaddleOCR, Deep Learning, Docker)

EDUCATION

B.Tech, Computer Science & Engineering — Baba Ghulam Shah Badshah University, Rajouri, J&K

2023 – 2027 | CGPA: 7.0 | Coursework: DSA, OS, DBMS, Computer Networks, Machine Learning, Software Engineering

Key Highlights: 480+ Play Store installs · 7+ production systems shipped · ~40% API latency reduction · 5,000+ RAG knowledge chunks · 430+ GitHub contributions across 16 repositories
